

iNFOTECH SECURITY

Instant Protection For What Matters™

about us

iNFOTECH SECURITY

iNFOTECH is a pioneer in providing information leakage protection and malware containment solutions for Internet-facing web servers. Our solutions effectively protect against leakages of personal, medical and financial records, server configuration information as well as intellectual properties. Our solutions also detect malicious or compromised content in public web sites and prevent it from being spread to unknowing site visitors.

Web servers are accessible to the public 24 x 7, hence they have the greatest exposure to information leakage and are most susceptible to being used for malware attacks. Currently, existing web security solutions are not effective in protecting against such risks.

iNFOTECH has stayed ahead of the curve in product innovation and continues to enhance overall web server security for our clients by preventing accidental or deliberate information leaks and malware propagation via their web servers.

We capitalize on our patented technologies to help our clients protect their brand and reputation, and avoid regulatory penalties and customer backlash that can arise from information leakage and malware propagation, thereby preserving their corporate image and competitive advantages.

WHAT WE OFFER

ASSESS

whether sensitive information is currently exposed on the Internet.

MONITOR

your web servers to ensure timely detection of information leaks and malicious/compromised content.

PROTECT

against leakages of sensitive information, such as customer records, corporate financial numbers, source code and configuration information.

CONTROL

when and what corporate information (e.g. annual report) can be published on your web servers after proper authorization.

DETECT

malicious content and malware links in compromised web pages.

PREVENT

compromised web pages from disseminating externally-hosted malware to your customers.

OUR TARGET CUSTOMERS

SERVICE PROVIDERS

such as banks, telcos, utilities and educational organizations that possess large customer databases containing private information and transaction records

PRODUCT COMPANIES

that have invested large amounts in product innovation and development

GOVERNMENT AGENCIES

that possess private information of their citizens

OUR ADVANTAGES

INFOTECT offers the world's first effective solution against rising risks of information leakage and malware propagation via Internet-facing web servers. Leveraging on our own patented content detection engine, we help our client to save time and cost by eliminating complex configuration and tedious central repository setup. Our affordable range of products are specially catered for organizations with varying levels of information leakage protection and malware containment needs.
